

Hydro Minder

page 1 of 1

Level-controlled filling system for liquids. Different containers can be refilled with a uniformly mixed solution without waiting or downtime. When the level in a container with the liquid starts to drop, the float of the Hydro Minder opens a non-electrically operated solenoid valve. The water flow sucks liquid concentrate into the water stream (Venturi principle) and thus automatically maintains the level of the ready-to-use solution. As soon as the set fill level has been reached in the container, the system switches off automatically. Further advantages of the Hydro Minder are the improved safety for employees due to the absence of contact with concentrated products and the high-quality chemical-resistant material. The economic performance profile is characterised by the easy maintenance and operation of the unit.

Areas of use

For maintaining the level of ready-to-use solutions in car wash containers.

Recommendations for use

"Possible dosage 1:1 to 1:100

Flow rate: 9.5l/min

Close the water tap when not in use."

Container

Container	Item no.
1 pce	999515

Warnings

For legal reasons, it must be ensured that there is no backflow into the fresh water (please install a backflow preventer).
